Minimum 5 Screens Per Order

Measuring Window Screens

Screens should be measured in 1/8" increments. The ideal method for measuring screens is to use an existing screen to ensure an exact fit. If an existing screen is not available take in consideration the brackets the screen sets in as well as any tension springs, latches, plungers, etc. MSH Screens are constructed using preformed corners for easy maintenance and repair. All framing channel, hardware, and screening materials are available for purchase for in-house screen repair and fabrication.

Please take care when placing your custom Window Screen order as custom cut orders are not returnable and may not be exchanged.
